

## Vaccine Policy Statement

- We firmly believe in the effectiveness of vaccines to prevent serious illness and to save lives.
- We firmly believe in the safety of our vaccines
- We firmly believe that all children and young adults should receive all the recommended vaccines according to the schedule published by the Center for Disease Control and Prevention and the American Academy of Pediatrics.
- We firmly believe, based on all available literature, evidence, and current studies, that vaccines do not cause autism or other developmental disabilities.
- We firmly believe that vaccinating children and young adults may be the single most important health-promoting intervention we perform as health care providers, and that you can perform as parents/caregivers. The recommended vaccines and their schedule given are the results of years and years of scientific study and data gathering on millions of children by thousands of our brightest scientists and physicians.

These things being said, we recognize there has always been and will likely always be controversy surrounding vaccines. Indeed, Benjamin Franklin, persuaded by his brother, was opposed to the smallpox vaccine until scientific data convinced him otherwise. Tragically, he had delayed inoculating his favorite son Franky, who contracted smallpox and died at the age of, leaving Ben with a lifetime of guilt and remorse. Quoting Mr. Franklin's autobiography

*"In 1736, I lost one of my sons, a fine boy of four years old by smallpox... I long regretted bitterly, and still regret that I had not given it to him by inoculation. This I mention for the sake of parents who omit that operation, on the supposition that they should never forgive themselves if a child died under it, my example showing that the regret may be the same either way, and that, therefore, the safer should be chosen."*

The vaccine campaign is truly a victim of its own success. It is precisely because vaccines are so effective at preventing illness that we are even discussing whether they should be given. Because of vaccines, many of you have never seen a child with polio, tetanus, whooping cough, bacterial meningitis, chicken pox, or even known a friend or family member whose child has died from one of these diseases. Such success can make us complacent or even lazy about vaccinating. But such an attitude, if it becomes widespread, can only lead to tragic results. Over the past several years, many people in the United States and Europe have chosen not to vaccinate their children with the MMR vaccine after publication of unfounded suspicion (later retracted) that the vaccine caused autism. Because of the lack of immunizations there has been small outbreaks of measles and several deaths from complications of measles in the United States and Europe over the past several years.

Furthermore, by not vaccinating your child you are taking advantage of thousands of others who do vaccinate their children, which decreases the likelihood that your child will encounter one of these diseases.

We are making you aware of these facts not to scare you or coerce you , but to emphasize the importance of vaccinating your child. We recognize that the choice may be a very emotional one for some parents. We will do everything we can to convince you that vaccinating according to the schedule is the right thing to do. However, **should you have doubts, please discuss these with your healthcare provider prior to your visit. Please be advised that delaying or "breaking up vaccines" ' to give one or two at a time over two or more visits goes against expert recommendations, and can put your child at risk for serious illness (or even death) and goes against our medical advice as providers. Finally, if you should absolutely refuse to vaccinate your child despite our efforts (at his/her first visit) we will not be able to care for your child.**

As medical professionals, we feel strongly that vaccinating your children on schedule with current available vaccines is absolutely the right thing to do for all children and young adults. Thank You for your time in reading this policy and please feel free to discuss any questions or concerns you may have about vaccines with any one of us.

*By signing below, I acknowledge that I have read and understand the above policy.*
